

FARJALLAH WAREHOUSE ZAHLE, LEBANON

CCL Client: Barmo Group

Consultant: Bureau Joseph Saab

Main Contractor: Barmo Group

Project Date: February 2018

Farjallah Group is one of the most highly respected mechanical engineering companies working across the Middle East and Africa. Through a large network of distributors and sister companies, Farjallah Group provides storage solutions, equipment, engineering services and technical support.

Unfortunately, problems experienced by the group with its existing warehouse floors throughout the MENA region have had a negative impact on productivity and incurred high maintenance costs.

At its newest warehouse in Zahle, Lebanon, Farjallah Group called upon CCL's specialised Surface division to provide a complete flooring solution which would be flat, level, have a high degree of abrasion resistance and incur minimal ongoing maintenance costs.

The CCL team was able to deliver a solution which met the client's exact specifications and because of this was awarded a further project at another Farjallah Group factory in Lebanon.

Surface Jointless Flooring System - DHPPB
